**From Department of the Army : Bio-Inspired Innovation And National Security** before purchasing it in order to gage whether or not it would be worth my time, and all praised Bio-Inspired Innovation And National Security:

Robert E. Armstrong, et al., editors. This volume is about applications of the biological sciences, here called "biologically inspired innovations," to the military. Rather than treating biology as a series of threats to be dealt with, such innovations generally approach the biological sciences as a set of opportunities for the military to gain strategic

advantage over adversaries. These opportunities range from looking at everything from genes to brains, from enhancing human performance to creating renewable energy, from sensing the environment around us to harnessing its power.

About the Author Robert E. Armstrong (1948-2008) was a Senior Research Fellow at the Center for Technology and National Security Policy.
