Designed with instructors needs in mind, the organization structures readings and questions for ease of course design and execution. Unique, multi-disciplinary content gives a concise introduction to basic coastal geology, ecology, geography, and economics that students need in order to understand coastal law and policy. On the cutting-edge of issues such as climate change, oil spill litigation, and hurricane insurance, Coastal Law showcases the most recent, important cases on coastal land-use regulation. End-of-chapter summaries and exercises aid in comprehension of material, allow for interim self-testing, and encourage in-class review.
