**Dana Beldiman : Innovation, Competition and Collaboration** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Innovation, Competition and Collaboration:

'This timely collection guides us to rethink the role of intellectual property law in a shared knowledge environment. Covering a wide range of topics - from smartphone wars to fashion design and from synthetic biology to digital content - this book greatly advances our understanding of open and collaborative innovation.' - Peter K. Yu, Drake University Law School, US  
Innovation, Competition and Collaboration explores intellectual property (IP) in an era of fast-paced innovation, where private contractual arrangements for shared use of IP are seen to enhance competitive advantage. This timely book examines emerging innovation models and offers a forward-thinking, globalized perspective on critical developments in IP law. As innovation processes become increasingly collaborative, new relationships among players in the innovation space emerge. These developments demand new legal structures that allow horizontally integrated, open and shared use of IP. In this book, expert contributors review fundamental issues surrounding the collaborative use of IP and discuss emerging trends. The topics discussed include: the interpretation of FRAND terms in the context of standard essential patents; secondary liability of technology providers; contractual arrangements in trademark law, and the treatment of IP issues in specific emerging industries. Academics and practitioners alike will find this compelling discussion both informative and pragmatic, benefiting from the insight into how and why, in this modern innovation environment, competitive advantage is not premised solely on IP exclusivity. Contributors: D. Beldiman, M.W. Carroll, S. Dusollier, G. Ghidini, A. Kur, T. Minssen, A. Ohly, A. Stazi, T. Vinje, J. De Werra, J.B. Wested
