However, based on research I did, once I decided to take the ISP Exam I quickly learned to not take it cold. I got my workbook from NCMS and researched what other tools are out there to better help prepare me for the exam. I quickly discovered Mr. Bennet's ISP certification manual and after reading the overwhelmingly positive reviews I knew this would be well worth the money! After purchasing the e-book I went at it. Mr. Bennet's manual provides great information on preparing and the sample test were perfect for managing my time more effectively for the test. Along with that, I also purchased his ISP Test Tips book. With over 75 slides, it gave me the knowledge so I would know what to expect once I sat down to take the exam. Well after all that, I took the ISP exam and PASSED it on the first try. Not only did I pass it, I finished the exam with time to spare. Time that I used to review the questions I was not 100% on it the first time. With Mr. Bennet's book you are not just investing into your ISP Exam, but also your career as an Facility Security Officer. As the title says this book is a MUST HAVE for anyone preparing to take the ISP Exam. 5 of 5 people found the following review helpful. So You Think You Know It All? By Lisa M. Like many seasoned industrial security representatives, I feel like I know it all. I have been in this industry almost 25 years; I know where to look for answers, and I have my contacts. But one day it occurred to me just how much has changed during my career - enter the Internet, enter computer based training, enter instant security clearances (Interims), enter the JPAS/e-QIP interface, enter diminished contact with my cleared employees and visitors. Admitting that the contact with my cleared employees is not as intimate as it used to have to be, somehow I felt that I was losing touch with my own skill set because of it. Jeffrey Bennett's book is very insightful into our industry, for he works with and supports, and motivates, this industry. You should consider buying the ISP Certification - The Industrial Security Professional Exam Manual, and spend 30 minutes with it each evening after work. Reinvigorate yourself. Give your imagination and professional growth some quiet stimulation. Remember. Refresh yourself. The best security education dollar you can spend, and not even leave home.

Updates with information from NISPOM Incorporating Change 2, May 18, 2016 Red Bike Publishing's Unofficial Study Guide gives you insight into test taking and has four 110 question length certification practice exams. This book is designed to give practice questions to those who are eligible to take the certifications such as the Industrial Security Professional (ISP) and Security Professional Education Development (SPeD) certifications. We developed this book with the understanding that it will assist with certification exam studies, but should not to be used as a standalone product. Our intention is to compliment career experience and NISPOM guidance. This book is meant to compliment the federal regulations and executive orders bringing about the National Industrial Security Program. It is also designed to help the reader draw from experience and suggests ways to study for and take certification exams. Those who are new to the field can use this as a study guide. However, in all cases this is not a guaranteed single source option for passing the exam. The author's intent is to present practice questions to prepare you for the test experience and not to suggest actual questions that may be found in any certification exam. We do not know what those questions may be. We have made every effort to make this manual as accurate and complete as possible. It has been written by an ISP and SPeD certified author and has been reviewed and edited by some of the most experienced Facility Security Officers and ISP's in the business. Sample Questions: 1. Contractors must obtain \_\_\_\_\_ approval before installing Intrusion Detection Systems. a. CSS b. CSA c. GCA d. GSA e. DIA 2. Some categories for IS can be protected with \_\_\_\_\_ controls : a. Additional b. Compensating c. Prescribed d. Protective e. Special 3. Open bin storage is not allowed for \_\_\_\_\_: a. TOP SECRET b. SECRET c. CONFIDENTIAL d. UNCLASSIFIED e. A and B The security industry is booming and defense industry security specialists are benefiting. Departments of Defense, Department of Energy, the Nuclear Regulatory Commission, Central Intelligence Agency and many other Federal and supporting contractors are in great need of experienced and qualified security specialists, managers and Facility Security Officers. As the industry becomes more demanding and positions more competitive, today's security specialists need to be on top of their game. This may be helpful as a supplement to certification studies. At the very least, it can prepare professionals better protect classified information under their care. We believe the certification process is just a stepping stone and not an end to a means. In fact, it's just part of a plan to help you become more influential. Being technically proficient is great, but building influence and commanding respect is more important. This book will help you make the move from being an administrator to becoming the "go to" security manager. The opening chapters demonstrate the importance of building networks, getting professional and academic education, and finding mentors. Credibility is key to influence and learning from others in the industry helps you build confidence in your decisions and capabilities. We also provide ideas for those of you who perform very few of the security functions identified in NISPOM. Our helpful hints increase experience and confidence and provide ideas for hands on training. You can also join our newsletter for updates, security awareness ideas, and NISPOM topics.
