From T.M.C. Asser Press : IT Support of the Judiciary: Australia, Singapore, Venezuela, Norway, The Netherlands and Italy (Information Technology and Law Series) before purchasing it in order to gage whether or not it would be worth my time, and all praised IT Support of the Judiciary: Australia, Singapore, Venezuela, Norway,

The Netherlands and Italy (Information Technology and Law Series):

Information Technology (IT) has found its way into legal practice and into the Judiciary. The present publication provides an insight into the developments in three continents, and more specifically a country in each of these continents: Australia (Australia), Singapore (Asia), and Venezuela (South America). In addition, reports by Norway, the Netherlands and Italy are provided. These countries are considered the best equipped and organized in IT for the Judiciary in Europe. Amongst the issues addressed are electronic filing systems, decision support systems, the employment of knowledge management, and on-line services, including publication of verdicts. The central issue in the development of IT support for the Judiciary worldwide appears the use of case management systems. This book is a comprehensive source on the use of IT in legal organizations, in particular the Judiciary. Practitioners (attorneys, company lawyers, consultants), governments, academics and students will find it invaluable.

About the Author Anja Oskamp, Computer/Law Institute, Free University, Amsterdam.
