From Hart Publishing : Juxtaposing Autonomy and Paternalism in Private Law before purchasing it in order to gauge whether or not it would be worth my time, and all praised Juxtaposing Autonomy and Paternalism in Private Law:

Selecting an appropriate balance in the law between autonomy and paternalism is an important and difficult task, requiring a careful consideration of moral, political, and economic values. The contributions in this collection deal

with the task at both general and specific levels, locating itself within the broader context of the relationship between law and market forces. Concepts are defined and analyzed, in particular the distinction between the coercive approach of "hard paternalism" in the law and the 'nudge' approach of "soft paternalism." Attention is then focused on how the tensions between the concepts are resolved in the law of contract, where deficient information and mistakes can justify an interventionist approach. Along with overviews of the issues within the general law of contract - and historical studies of the relevant principles in the common law and Roman law - the book also includes studies of specific areas, notably insurance contracts and consumer bankruptcy. The authors are economists, sociologists, and traditional legal scholars.

About the Author Anthony Ogus is Emeritus Professor at the University of Manchester and Erasmus Professor of Fundamentals of Private Law, Erasmus School of Law, Rotterdam. Willem H van Boom is Professor of Law at Erasmus School of Law, Rotterdam.
