Jean Eggen : Toxic Torts in a Nutshell (Nutshells) before purchasing it in order to gage whether or not it would be worth my time, and all praised Toxic Torts in a Nutshell (Nutshells):

This work introduces the study of toxic torts and identifies the theories of liability related to both toxic products and environmental pollution. It also covers special defendants, such as employers, governmental entities, and government

contractors; workers compensation; insurance coverage issues; key defenses such as statutes of limitations and preemption; causation and scientific evidence; and new theories of injury and damages. A chapter examines regulation of hazardous releases into the environment under the federal Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). The work also addresses mass toxic torts and examines emerging actions related to nanotechnology and hydraulic fracturing.
